Ártico: tras las huellas del cambio climático (Spanish Edition) Antonio Cerrillo, Xavier Cervera

El Ártico es el termómetro del planeta, una región especialmente sensible al cambio climático. La extensión del hielo marino se ha reducido en verano casi un 40% desde 1979. Para conocer esa geografía en transformación, 'La Vanguardia' participó durante el verano de 2010 en un viaje a bordo del buque de exploración 'Fram', que permitió recorrer el archipiélago de las Svalbard (al norte de Noruega, a unos 1.000 kilómetros del polo Norte) partiendo desde el cabo Norte. Científicos y otros viajeros recorrieron los singulares paisajes de unas islas convertidas en laboratorio de investigación sobre cambio climático. Este libro relata en siete capítulos la experiencia vivida con textos de Antonio Cerrillo e imágenes de Xavier Cervera.
