El ahorro energético: estudios de viabilidad económica: 1 (Spanish Edition) Mario Aguer Hortal

Este libro no pretende efectuar un estudio completo de los diferentes y muy numerosos procesos en los que puede darse un ahorro energético, sino ilustrar con los ejemplos más emblemáticos las bases de una metodología de trabajo que es bastante similar en todos los casos. Se establecen los criterios para determinar, de una forma sencilla, la viabilidad económica en diferentes alternativas de ahorro energético, utilizando parámetros de evaluación económica de primer y segundo orden. Se introduce también el concepto de balance de valor. Los casos en los que se estudia el impacto del ahorro energético son entre otros: sistemas de calefacción, producción de ACS convencional, bomba de calor, máquinas de refrigeración, cogeneración y captación de energía solar fototérmica. INDICE: Criterios fundamentales para evaluar una inversión. La energía: un mismo concepto, diferentes manifestaciones. Utilización de los criterios de valor. Estudio de algunos casos prácticos de ahorro energético.
