Multicellular Animals: Volume III: Order in Nature - System Made by Man: 3 Peter Ax

The turtle, toothless, soft bodied, enclosed in boney, shell, is primordial and invincible, slow and changeless. Locked into turtles of time and tradition, inertia and ignorance, darkness and fear, we cajole and pull, struggle and push until we learn that ideas set us free. Fairbanks, Alaska University Campus Sculpture LIZ BIESOT 1985 The evolutionary order of organisms as a product of Nature and its representation in a phylogenetic system as a construct of Man are two different things. The order in Nature consists of relationships between organisms. It is the result of an historic process that we call phylogenesis. When working with this order we must clearly differentiate between its identification and the subsequent description of what has been identified. When identifying the order we are placing ourselves in the framework of "hypothetical realism" (Vol. 1, p. 11); it is principally impossible to determine how well or how poorly the real world and our cognitive apparatus match. For phylogenetics as an historically directed discipline, however, the following limitation is more relevant. We cannot demonstrate experimentally whether or not that which we have interpreted from the products of phylogenesis corresponds to facts of (hypothetical) reality.
