## **Respiration: Proceedings of the 28th International Congress of Physiological Sciences, Budapest, 1980: Respiration 28th, v. 10**

Advances in Physiological Sciences, Volume 10: Respiration focuses on the movements in respiratory research, including studies on the breathing process in humans; how respiratory muscles aid in respiration; and how various drugs affect breathing. The book also presents how respiratory muscles in humans, birds, and mammals function during different activities. The text also outlines the diseases that arise due to limited expiratory airflow and how muscles undergo fatigue.

Divided into nine parts and organized into 77 chapters, the book further looks into the function of the lung during respiration through the comparison of the breathing patterns of humans, birds, and mammals. The text also elaborates how drugs are instituted in various laboratory exercises to determine their effects on the respiratory system in all the subjects mentioned. The book also identifies the different parts of the body that are involved in the breathing process.

Readers and scholars who are interested in research concerning the trends in respiratory physiology will find this book interesting.
