UNA NUEVA CIENCIA DE LA VIDA:La hipótesis de la causación formativa (Spanish Edition)

Rupert Sheldrake

He aquí un libro revolucionario que ha sido comparado, en importancia, al Origen de las especies de Darwin. El autor explica que las especies y los organismos pueden aprender, desarrollarse y adaptarse a través de un proceso de resonancia mórfica. Si una paloma de Londres aprende un hábito nuevo, automáticamente palomas de otras partes del mundo manifestarán una tendencia a aprender el mismo hábito. Pero lo mismo ocurre en el mundo inorgánico. Y en el humano. Cualquier sistema natural hereda una memoria colectiva. Existe una vía no material de transmisión del conocimiento. Al desafiar convenciones establecidas por la ciencia clásica, la hipótesis de la causación formativa ha suscitado una de las polémicas intelectuales más apasionantes de estos últimos años. El debate continúa y en todo el mundo se realizan experimentos para comprobar o refutar tan brillantes y provocadoras ideas.
