Space-Filling Curves (Universitext) Hans Sagan

The subject of space-filling curves has generated a great deal of interest in the 100 years since the first such curve was discovered by Peano. Cantor, Hilbert, Moore, Knopp, Lebesgue, and Polya are among the prominent mathematicians who have contributed to the field. However, there have been no comprehensive treatments of the subject since Siepinsky's in 1912. Cantor showed in 1878 that the number of points on an interval is the same as the number of points in a square (or cube, or whatever), and in 1890 Peano showed that there is indeed a continuous curve that continuously maps all points of a line onto all points of a square, though the curve exists only as a limit of very convoluted curves. This book discusses generalizations of Peano's solution and the properties that such curves must possess and discusses fractals in this context. The only prerequisite is a knowledge of advanced calculus.

From reader reviews:

Jeffrey Lockwood:

Do you have favorite book? Should you have, what is your favorite's book? Publication is very important thing for us to know everything in the world. Each reserve has different aim as well as goal; it means that reserve has different type. Some people really feel enjoy to spend their a chance to read a book. These are reading whatever they have because their hobby is usually reading a book. What about the person who don't like reading through a book? Sometime, man feel need book if they found difficult problem or even exercise. Well, probably you'll have this Space-Filling Curves (Universitext).

Kathy Woodward:

Reading can called mind hangout, why? Because when you are reading a book specially book entitled Space-Filling Curves (Universitext) your brain will drift away trough every dimension, wandering in most aspect that maybe mysterious for but surely might be your mind friends. Imaging each and every word written in a publication then become one application form conclusion and explanation that will maybe you never get before. The Space-Filling Curves (Universitext) giving you yet another experience more than blown away your brain but also giving you useful data for your better life in this era. So now let us teach you the relaxing pattern the following is your body and mind will probably be pleased when you are finished reading it, like winning a. Do you want to try this extraordinary wasting spare time activity?

Carlos Vickers:

Are you kind of busy person, only have 10 or perhaps 15 minute in your time to upgrading your mind ability or thinking skill possibly analytical thinking? Then you are having problem with the book than can satisfy your limited time to read it because pretty much everything time you only find publication that need more time to be go through. Space-Filling Curves (Universitext) can be your answer since it can be read by you who have those short extra time problems.

Crystal Parrish:

A lot of guide has printed but it differs from the others. You can get it by online on social media. You can choose the very best book for you, science, amusing, novel, or whatever by means of searching from it. It is called of book Space-Filling Curves (Universitext). Contain your knowledge by it. Without leaving the printed book, it might add your knowledge and make anyone happier to read. It is most critical that, you must aware about publication. It can bring you from one destination for a other place.
